

Automatic drilling rock drill video explanation

How do automatic drilling machines work?

Automatic drilling machines are equipped with advanced components such as servo motors, programmable controls, and high-precision drill heads. These parts work together to deliver consistent depth and precise holes in various materials, making the machines a valuable asset in any industry that requires accurate drilling.

Why are automatic drilling machines important?

Automatic drilling machines are indispensable for businesses aiming to increase productivity, improve precision, and lower operational costs. With their ability to handle various materials, operate at high speeds, and provide consistent results, they are essential for efficient manufacturing.

What makes a drilling machine a good choice?

Programmable Controls: Modern automatic drilling machines come with user-friendly interfaces, allowing operators to input specific coordinates, set drilling depth, and adjust speed. This capability makes them ideal for complex, multi-axis drilling applications, where precision is key.

What is a drill rod handling system?

A part of an automated rod handling system that allows to pick up drill rods automatically after the desired drilling depth is reached. Increases productivity and safety, and reduces the stress on rock drilling tools and the entire machine. Standard on all SmartROC rigs with DTH and COPROD drilling method.

How does autodrill 2 work?

Set the target depth of a hole, and with the push of a few buttons, the machine will drill the hole fully autonomously. AutoDrill 2 allows for safer and more productive operations. Upload a drill plan into the drill rig and navigate to the correct collaring point without having to mark the holes.

What is the first step in drilling a well?

The first step in drilling a well is the planning phase. Members of the oil companies, executive staff and senior exploration team meet to review information associated with a prospect and to get an understanding of the scope of work involved.
