

Reviews for drill rig mobilized

What is rig move/mobilization?

Rig move/mobilization is part of rig cycle time and consists of rig-down, transportation, and rig-up activities. Rig cycle is the time between rig release from the current well (location) and rig release of the next well. It has three main components, namely, drilling, production testing, and rig move/mobilization activities.

What is a highly mobile drilling rig?

At their request, rig manufacturers are expanding the operating and mobility features of the industry's rigs to a new level of sophistication - the highly or ultra-mobile rig. Highly mobile drilling rigs bring increased agility, automation, safety focus and cost savings, and are being used in deeper oil plays to perform top-hole work.

Why is rig move/mobilization time considered as unproductive rig time?

This chapter focuses on optimization of rig move/mobilization time, which is considered as unproductive rig time, so as to ensure more time for on-bottom drilling and completion. Rig move/mobilization is part of rig cycle time and consists of rig-down, transportation, and rig-up activities.

How rig rental and operating cost of deep drilling rig is increasing?

Rig rental and operating cost of deep drilling rig is very high and cost of drilling is continuously rising. Therefore, exploration and production (E&P) companies and drilling operators are looking for all possible measures and avenues to minimize unproductive rig time and control soaring drilling cost.

How to optimize rig move/mobilization time?

Network analysis based on Program Evaluation and Review Technique and Critical Path Method (PERT/CPM) technique is used to optimize rig move/mobilization time and develop optimal schedule of rig move activity.

How does a drillmec rig work?

The driller controls the hoisting system from the driller's cabin using a joystick. The design and construction of these highly mobile rigs have become very sophisticated, as with the case of the Drillmec HH Series rig, where the main rig components, such as the mast and part of the drill floor, are fused to the specially designed trailer.

We have mobilized a rig to complete an initial follow up program to test the immediate 300m to 500m of strike around MAD-22. Based on the ...

Abstract This paper provides an overview of the common drilling methods and their applications in geology and engineering. The five-drilling methods discussed in the paper are auger drilling, ...

Phase One Program Results The drill results above form part of a first phase 4,000-m drill program which
