

## Video on how to polish the drill rod of a rock drill

What motion should you use when polishing with a drill?

Move the drill in a circular or back-and-forth motion, depending on the surface area and shape. Hold the drill firmly and apply gentle pressure to the surface. Ensure that the pad covers the entire surface evenly to achieve a consistent result.

How do you use a polishing pad with a drill?

With the surface prepared and the polishing pad attached, hold the drill firmly and apply gentle pressure to the surface. Move the drill in a circular or back-and-forth motion, depending on the surface area and shape. Ensure that the pad covers the entire surface evenly to achieve a consistent result.

What should I do if I'm tired after polishing a drill?

If you feel tired while polishing a drill, remember to take regular breaks and rest your hands and arms to prevent fatigue or muscle strain. This will help you maintain control and avoid accidents caused by tiredness.

How can I prevent fatigue while polishing a drill?

To prevent fatigue or muscle strain, remember to take regular breaks and rest your hands and arms. This will help you maintain control and avoid accidents caused by tiredness. Clean up properly: Once you are done polishing, it is important to clean up the work area and properly store the drill polishing pad.

What are the main types of drill polishing pads?

There are two main types of drill polishing pads: foam pads and wool pads. Foam pads are typically used for light to medium polishing jobs, while wool pads are more aggressive and used for heavy-duty polishing or compounding.

How do I choose a Dremel for rock polishing?

Choose a Dremel with a low RPM for rock polishing. Variable speed options are best. Models with single or high-low options don't work as well as the variable speed. You'll find pros and cons with using battery-powered Dremels, as opposed to the plug-in varieties.
